MODELING & SIMULATION CERTIFICATION

Entry Level Professionals
Interested in an MS&T Career

THE KEY TO YOUR FUTURE

YOUR FUTURE IS HERE AND NOW

The National Center for Simulation (NCS) Modeling and Simulation (M&S) Certification Program is the key to YOUR exciting future.

It is an Industry-accredited certification aligned with the knowledge, skills and practice of the high-tech M&ST workforce.

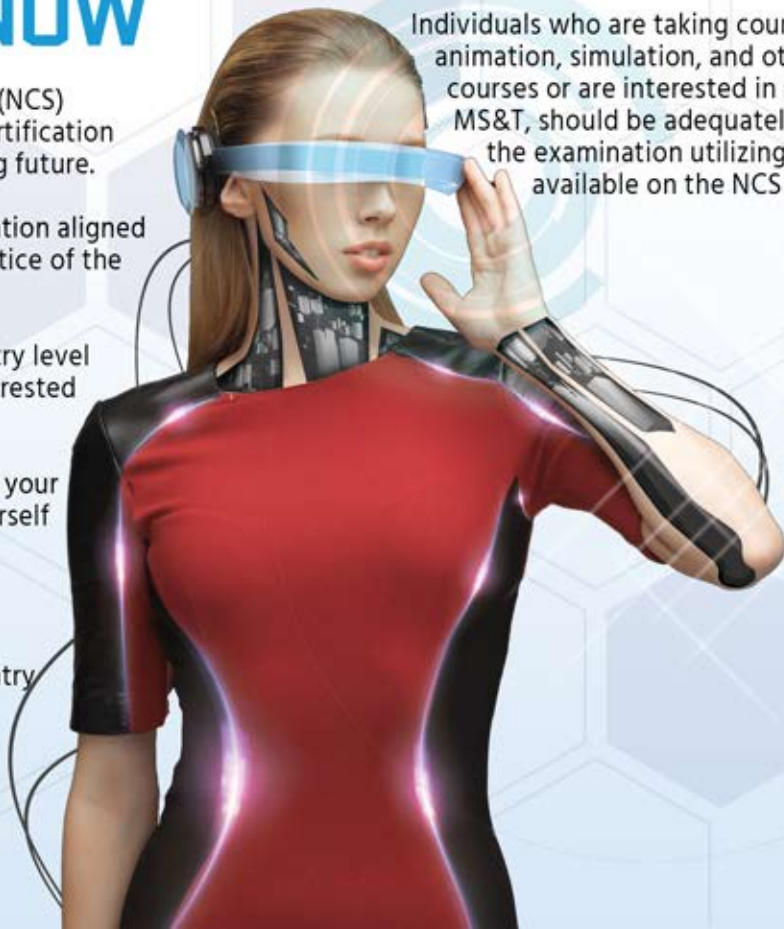

This certification is available for entry level professionals across the nation interested in joining the MS&T workforce.

When you pass the exam and EARN your certification, you are preparing yourself for internships and a rewarding, high-paying career in a high tech industry.

Certification also facilitates your entry into post-secondary education.

Prepare today to take the Certification Exam and launch your career in simulation!

Individuals who are taking courses in gaming, animation, simulation, and other related courses or are interested in starting a career in MS&T, should be adequately prepared to pass the examination utilizing the study guide available on the NCS website.

M&S CERTIFICATION IS A WIN-WIN-WIN FOR EVERYONE...

Communities Win

In some states, participating schools obtain state funding and high tech status that improve the school's comprehensive capabilities, its overall performance grade, and gives well-deserved teacher recognition and monetary awards.

American Industry Wins

M&S is considered a national critical technology. Graduates having M&S skill sets are crucial to the workforce of the future, leading the nation into a more competitive position in the world marketplace.

The certification creates a pool of skilled and motivated students who are ready for recruitment for both paid and unpaid internships.

STEM Students Win

Interest and competency in STEM prepares students for high paying, exciting M&S careers in defense, medical, entertainment, business, education, training, and other diverse fields.

Student interns who are M&S certified are high-performers, better prepared and more qualified as candidates for full-time employment in the M&S industry. They also require less entry-level training, improving overall productivity with the potential benefit of remaining with the organization for a longer period of time.
