Interactive Designer

Work Schedule: Full Time

Salary: \$54,308 – \$80,505*

Location: Washington, DC metropolitan area

[Add to Job Cart](#)

*Higher starting salary possible depending on experience level.

CIA multimedia production units are seeking creative user interface and user experience designers who can convey an analytic story visually through multimedia for the President of the United States, US policymakers, and other officials.

As part of a team you will partner with peers to produce a wide variety of products, including complex intelligence analysis, training material, and other important pieces. Products are designed for conveyance via mobile devices, web, and print. All work is conducted in a team environment, with members focusing on one or more specialty, such as scripting, graphic design, cartography, 3D animation, motion graphics, illustration, and imagery. Applicants must work well in a team environment and be passionate about information design and technology (mobile and web). We are seeking junior and experienced designers and offer competitive pay.* Opportunities exist to participate in internal training as well as external workshops and conferences.

Our overarching unit, the Multimedia Production Group, has won awards externally and within the Intelligence Community for creating visually-engaging intelligence products. We have a very talented team of individuals who believe in collaboration and innovation and have a passion for design and technology.

Minimum Requirements:

- Bachelor's degree in Interaction Design, Graphic Design, Fine Art, Cartography, GIS, Computer Science or related discipline with a strong emphasis on graphic, information, or user experience design.
- Ability to shape and lead solutions to data visualization in an increasingly complex and changing technological environment.
- Experience with the Adobe creative suite, HTML5, CSS3, Javascript, and version control applications.
- Applicants with a background in design must provide a strong creative portfolio demonstrating good use of typography, grid-based design, white space, and color theory.
- Applicants with a background in cartography/GIS should have experience with the ESRI GIS suite and familiarity with cartoCSS and Map tile presentation libraries such as Leaflet, OpenLayers, and/or Cesium.
- Excellent interpersonal skills are required to work and interface with customers, coworkers, management, and contractors.
- Knowledge of multimedia production tools and methodology and a strong technical aptitude to quickly learn new software and hardware.
- Experience with user experience concepts and an ethos based on user testing.
- Experience creating wireframes, storyboards, and prototypes for use in design review and user testing.

MYTH #1

An average day as a CIA employee involves a car chase in a foreign city.

TRUE or FALSE?
